* Recording Voice Message

1. Press MESSAGE button

2. Press ENTER button

3. The Dialer will sound bip ~ bip for 2 seconds, it means the dialer is ready for recording message for 20 seconds. Speak to the MIC as possible as clearly

4. At the end press the ENTER button

Notice: If the massage lasts 20 seconds, Pressing enter is not necessary.

*Playback Voice Record Message

1. Press MESSAGE button
2. Press CHECK button
3. The message will be played by speaker automatically.

*Entering Phone Numbers

1. Press MEM button
2. Press the number of the memory (1–20) button
(1 is mean the first alarm number, 20 is mean the 20th (last) alarm number)
3. Press ENTER button
4. Enter the phone number that you want (at most 16 digits) and press ENTER button by end
5. Saved shows that the number is entered in the memory.

Notice : if you don't want entering phone number any more, you should just press ✳

Notice: entering every # between numbers causes 2 seconds of pause at the time of dialing , this capability is usefully when device pauses between code and phone number.

Notice: if the phone number that you entered is 16 digits , you don't need to press the enter at the end of the number and device will automatically enter the number in the memory.

Notice: dialer at the time of dialing, for example: If you only put 8 memories of alarm number, then the dialer will dialer the these number only, and delete empty memories, so you do not need to program the numbers .

3. Press 4 button

4. EDGE TRIGGER will be showed on LCD.

In this mode, if you want stop dialing as soon as possible you should

be press ENTER button for several seconds until the dialer exits from

the trigger mode with the dialer sound of one bip. Maybe this action lasts

several seconds.

Notice: dialer default setting is Level trigger mode 1.

So for using this mode you don't need to program the dialer

Notice: In each of two trigger mode, TRIGGER signal lasts for 3 seconds.

Notice: In each of two trigger mode dialed number wouldn't be abandoned

uncompleted.

* Turning off LCD:

Dialer's LCD display 2 minutes after every activity turns off

monitor. For turning on the monitor press any key.

* Test of Alarm:

If the negative wire of trigger connects to Terminal T2, or positive
wire connect to T 1 for 3 seconds, dialer with sounds of bip and It
will start dialing.
After every dialing, dialer will playback voice message 2 times.

* Alarm Status of SIREN:

At the time of dialing after every playback of voice message if siren
continues, dialer will sound 3 bip remind user, and if siren stops,
dialer will sound one bip for remind of user of the alarm status.

* Memory of Alarm:

Any triggered alarm happened when you are away, dialer will
showing ALARM on LCD remind of user.
These remind will be clear by press each of dialer button

* Dialing system:
